SpasiX — Setup & trading

SpasiX • BUILD 2026-10-27a • MetaTrader 5 (IC Markets) on Windows • LIVE • PROP • DEMO • BACKTEST

Updating to build 27a (3 minutes) — your open trades are safe

- Close the old SpasiX (your positions stay open in MT5 with their stops and targets). Replace `SpasiX.exe` with the new one.
- Copy the new `SpasiXBridge.mq5` (**v5**) into MT5's `MQL5\Experts` folder (replace the old file) and **restart MT5**.
- On the chart with the bridge: **remove the old bridge** (right-click → Expert list → Remove) and **drag SpasiXBridge on again** → tick **Allow Algo Trading** (Common tab) → OK.
- Check the **Algo Trading** button in the MT5 toolbar is **green**. Start SpasiX: the start screen shows **WELCOME BACK • N TRADES STILL OPEN → ⟳ RESUME LIVE** (key R).

1 First time only: the bridge in MT5

- MT5 → **File** → **Open Data Folder** → `MQL5` → `Experts` → paste `SpasiXBridge.mq5` → restart MT5.
- MT5 → **Tools** → **Options** → **Expert Advisors** → tick **Allow WebRequest for listed URL** → add `http://127.0.0.1`.
- For deep backtest history: **Tools** → **Options** → **Charts** → **Max bars in chart = Unlimited**.
- Drag **SpasiXBridge** onto ONE chart → tick **Allow Algo Trading** → OK. Start `SpasiX.exe` (first time: allow the .NET 8 Desktop Runtime; "Windows protected your PC" → More info → Run anyway).

2 The start screen

- 📈 **LIVE** your MT5 account • 🏆 **PROP** a CFD prop account with the firm's rules • 🎮 **DEMO** your MT5's live prices with a simulated account (your balance, RAW = no commission + wider spread, STANDARD = commission + spread near 0 — nothing reaches MT5) • 🧪 **BACKTEST** MT5's history replayed with its real ticks.
- Several modes can be open at once: they are TABS in the title bar (⌂ HOME, ● LIVE, 🎮 DEMO, 🧪 BACKTEST, + opens another). ✕ on a tab closes that mode and returns HOME. The data (history, ticks, pool, settings) is kept on **F:\SpasiX\MT5** when you have an F: drive (⚙ SETUP ▸ THE DATA FOLDER changes it). Keys 1 – 4 choose. The RESUME card (top right) shows the trades still open in MT5 and the saved DEMO. ⌂ **MODES** comes back here.

3 The header and the chart

- **OPEN P/L** big, its border pulses green / red • ▲ **BUYS / ▼ SELLS**: tickets • lots • P/L each, ★ = the side that leads • ⇅ **HEDGED** when both are open (net lots). Clocks: New York, London, Tokyo, MT5's server (+ the chart's zone) with the day.
- Each instrument's tab shows **its own P/L** (and its chip in the toolbar). Every timeframe button counts down to its next candle.
- 🎨 20 themes — **MT5**, MT5 Classic, MT5 Light, easy-on-the-eyes ones (Midnight Soft, Nordic Frost, Forest Calm, Solarized, Warm Dusk, Sepia Paper) and unique ones.
- Mouse: wheel = zoom • drag the chart = move • drag the time axis: **left = zoom in, right = zoom out** • drag the price axis = stretch • double-click = back to now • right-click = the menu • F11 = full screen.

4 Trading

- All ✓ in the trade panel → **one click on 🔓 ARM TRADING**. Armed until DISARM or closing SpasiX.
- **SELL / BUY** go in **at once** (LOTS, optional stop / target distance). The small ✕ on a ticket closes it at once.
- Tickets look like MT5: buys and sells in their colours, **drag a ticket line** = set its stop / target, drag a stop / target to move it — on positions **and on pending orders**.
- **Right-click the chart** → BUY / SELL LIMIT or STOP here → it asks the lots → PLACE.
- Every **close all** (buys / sells / winners / losers / everything) asks first. ⚖ **BREAKEVEN**: every ticket in profit to its entry + **points or $** (0 = the entry), this symbol or all — asks first.
- 🧺 **BASKET**: close everything when the open P/L reaches **+$X** (e.g. +$350) or falls to **−$Y** — switched on with one confirmation, then it closes by itself once.
- `MaxLotsPerOrder` in the bridge caps every order. `EnableTrading = false` makes SpasiX read only.

5 🧪 Backtest studio

- 📂 **DATA**: tick the symbols (gold, USTEC / NAS100, BTCUSD … together), the days (chips or FROM → TO), **RAW** (commission) or **STANDARD** (no commission, wider spread), the balance → ▶ **START**. It downloads MT5's 1-minute candles **and real ticks** once. ⓘ **MT5 SPEC**: contract, swap (its mode, triple day), margin per lot, hedged margin, your commission, spread.
- Replay bar: ⏮ • ◀◀ DAY • ◀ CANDLE • ◀ 1m • ▶ PLAY • 1m ▶ • CANDLE ▶ • DAY ▶▶ • speed 1× … MAX • ⏩ London / NY open • 📅 **GO TO** a date + time or change the days. Keys: Space, ← → candle, Shift + ← → minute, Page Up / Down day. Going back keeps your trades before that moment.
- ● **REAL TICKS x %** = how much of the replay moves exactly as MT5 recorded it.
- 🗂 **POOL**: every finished day is saved in a TEST with all its numbers and trades; DAYS / WEEKS / MONTHS / YEARS; 🌐 **HTML TRACKER** (calendar, equity curve, tables, trades); ＋ NEW TEST keeps the old ones; 🧹 CLEAR asks first.

6 🏆 PROP, 📊 TRACKER, 📰 NEWS

- **PROP**: a preset (FTMO / The5ers / FundedNext / E8) or your firm's numbers; new entries are refused at a limit (closes always work).
- **TRACKER**: calendar, weeks, win rate, profit factor, drawdown, equity curve, by hour / weekday / symbol, a journal per day.
- **NEWS**: ⏭ **UPCOMING** (1 week ahead, up to 4) and ⏮ **PAST**, a sub-tab per day with its high-impact count; headlines on the right. 👁 **STREAM** blurs your name and number.

If something is not right

- A red ✖ line in the trade panel names the switch that is off (usually the MT5 toolbar's **Algo Trading** or the bridge's **Allow Algo Trading**).
- An order answered "✖ …" = MT5's own reason (market closed, invalid stops, not enough margin, …).
- The real ticks, MT5's swap / margin per symbol need bridge **v5** (⚙ SETUP shows the version).
