SpasiX — Setup & trading

SpasiX • BUILD 2026-10-25a • MetaTrader 5 (IC Markets) on Windows • LIVE • PROP • BACKTEST

Updating from build 24c (3 minutes)

- Close the old SpasiX. Replace `SpasiX.exe` with the new one (same folder as before, not inside MT5).
- Copy the new `SpasiXBridge.mq5` (v4) into MT5's `MQL5\Experts` folder (replace the old file) and **restart MT5**.
- On the chart with the bridge: **remove the old bridge** (right-click → Expert list → Remove) and **drag SpasiXBridge on again** → in its window tick **Allow Algo Trading** (Common tab) → OK. Its new input **EnableTrading** is **true** already.
- Turn ON **Algo Trading** in the MT5 toolbar (green). Start SpasiX → the start screen asks LIVE / PROP / BACKTEST.

1 First time only: the bridge in MT5

- MT5 → **File** → **Open Data Folder** → `MQL5` → `Experts` → paste `SpasiXBridge.mq5` → restart MT5.
- MT5 → **Tools** → **Options** → **Expert Advisors** → tick **Allow WebRequest for listed URL** → add `http://127.0.0.1`.
- For deep backtest history: **Tools** → **Options** → **Charts** → **Max bars in chart = Unlimited**.
- Drag **SpasiXBridge** onto ONE chart → tick **Allow Algo Trading** → OK. Start `SpasiX.exe` (first time: allow the .NET 8 Desktop Runtime; "Windows protected your PC" → More info → Run anyway).

2 The start screen

- 📈 **LIVE** — your MT5 account in real time. 🏆 **PROP** — a CFD prop-firm account on MT5 with the firm's rules on screen. 🧪 **BACKTEST** — MT5's own history replayed (works without MT5 once the days are downloaded).
- Keys 1 / 2 / 3 choose. ⌂ **MODES** in the header brings you back here.

3 The chart

- **Symbols** (cyan) — ● = you have tickets on it • **+** = add any instrument of your broker. **Timeframes** (gold) M1 … W1. ▣ **1 /** ◫ **2 /** ⊞ **4** = split screen.
- 📈 **INDICATORS ▾** — tick them, each with its name and colour: EMA 9 / 21 / 50 / 200, VWAP, Bollinger, fair-value gaps, NY opening range, yesterday high / low, sessions (Asia / London / New York) and **SpasiX setups** (a sweep of a swing high / low that closes back and breaks; the live one blinks with its entry, stop and 2R target; its record — wins, %, expectancy — is shown on the chart).
- 🎨 8 themes • 🕘 time zone (New York, London, …, MT5's server).
- **Colours**: buys = mint, sells = red, pending orders = amber, the price = white with a pulse on every new price. Point at a line: it lights up and flashes once, and a card shows the ticket (P/L, swap, its stop / target in $).
- **Drawing rail** (left): cursor, horizontal line / ray, vertical line, trend line / ray, rectangle, Fibonacci, text, **long / short position** (risk / reward with your lots, in $), measure, 🧲 magnet, colour, 🗑. Right-click a drawing: colour, width, dashed, text, place it as an order, duplicate, delete.
- Mouse: wheel = zoom • drag the chart = move • drag the time axis = stretch • drag the price axis = stretch the price • double-click = back to now • **right-click** = the menu (on a ticket: close, half, breakeven, stop / target here; on an order: move here / cancel) • F11 = full screen.

4 Trading — please test on a DEMO first

- The trade panel shows a ✓ / ✖ for every switch: bridge v4, EnableTrading, Algo Trading (toolbar), Allow Algo Trading (the bridge), the account. All green → 🔓 **ARM TRADING** → it asks (red for a REAL account). Armed until DISARM or closing SpasiX.
- **LOTS**, optional **STOP / TARGET distance** (the panel shows the risk / reward in $) → **SELL** / **BUY** — each asks first, showing the size big (one-click only up to 2 lots, if you switch it on).
- **Limit / stop**: BUY LIMIT / SELL LIMIT / BUY STOP / SELL STOP → type the price or 🎯 **PICK** on the chart → PLACE. Or right-click the chart at a price.
- On the chart: ✕ closes (asks) • **drag a ticket line** = sets its stop / target • drag a stop / target = moves it • drag an order = new price. Many tickets fold into one label per side (right-click ▸ Tickets on the chart).
- **MANAGE**: close all / buys / sells / winners / losers / orders • ⚖ breakeven (+ points) • ⛔ close everything. 💼 **POSITIONS**: every ticket with ✕, ½, S/L, T/P, ⚖.
- `MaxLotsPerOrder` in the bridge caps every order. Set `EnableTrading = false` to make SpasiX read only.

5 🧪 Backtest studio

- 📂 **DATA**: the symbol, the days (or LAST 5 / 10 / 20, THIS / LAST WEEK, LAST MONTH), the warm-up days, the start time; the account: balance, leverage, commission per lot, spread (REAL from MT5's candles or fixed), slippage, swap, stop-out → ▶ **START** (it downloads the missing days from MT5 once and keeps them on this PC).
- The replay bar: ⏮ restart • ▶ / ⏸ (Space) • ⏭ one candle (→) • speed 1× … 1000× / MAX • ⏩ London / NY open / next day • the New York clock and the progress.
- Trade exactly like live (hedging, limits, stops, drag the lines). 📊 **STATS** = the tracker of the run; past runs are listed in DATA.

6 🏆 PROP and 📊 TRACKER

- **PROP**: press a preset (FTMO / The5ers / FundedNext / E8) or type your firm's numbers: account size, daily loss, max loss (static or trailing), target, days, consistency. The header shows the meters; SpasiX refuses a new entry at a limit or when the order's stop risks more than what is left today (closes always work).
- **TRACKER**: the calendar of every day (net after commission and swap), the week totals, win rate, profit factor, expectancy, best / worst day, drawdown, the equity curve, P/L by NY hour / weekday / symbol, the day's trades and a journal note per day.
- **MARKET**, **NEWS** (ForexFactory calendar + live headlines), 👁 **STREAM** = only your name and account number are blurred.

If something is not right

- A red ✖ line in the trade panel says which switch is off. The TRACKER / backtest download need bridge v4.
- An order answered "✖ …" = MT5's own reason (market closed, invalid stops, not enough margin, …).
- Chart corner "waiting for the SpasiX app (error 5272)" → start SpasiX.exe.
