Eval Plan 2026

50K evaluations: end-of-day trailing $2,000, pass at +$3,000 over at least 2 days, best day ≤ 50%. Real 1-minute MNQ and MGC data from July 2020 to 2 October 2026. A new batch of 30 accounts starts **every weekday** (1,550 batches per plan). The accounts trade every day until each has passed or blown. Take profit +$1,500 **after costs**. Costs: $1 a contract round trip plus 1 tick of slippage each side, $120 per eval. 640 plans tested.

How the drawdown works (as modelled)

DAY 1 RESULT	BALANCE	FLOOR (HIGHEST END-OF-DAY BALANCE − $2,000)	ROOM ON DAY 2
+$1,500	$51,500	$49,500	$2,000 (full)
breakeven	$50,000	$48,000	$2,000 (full)
−$1,500	$48,500	$48,000	$500
−$2,000	$48,000	blown	can't trade

The plan to use going forward

⚡ **Every trading day at 2:00 New York (London open): every alive account opens MNQ 20. All accounts of the same firm take the same side; each firm flips its own coin.** Take profit +$1,500 after costs as a limit order. No stop: the account can use its full room. One trade per account per day. A batch is done in about 2 days.

1. Average **30.3%** of evals pass (2020–23 30.2%, 2024–26 30.4%), a median of **10 of 30** per batch.
2. One side per firm means you never hold opposite positions inside one firm, which most firms forbid.
3. The price: about 1 batch in 6 passes nobody (every firm's coin loses on the same days). Keep enough budget for 2–3 batches.
4. Steadiest alternative: the ★ rotation one after another, always BUY, MNQ 20 (31%, at least 5 pass in 97% of batches, about 5 sessions per batch). It leans on Nasdaq's rise from 2020 to 2026: always SELL passed 28.5%.

PLAN	PASSED	2020–23 / 2024–26	PER BATCH OF 30 (10TH–90TH)	5+ PASSED	NONE PASSED	DAYS PER BATCH	FEES / FUNDED
⚡ GOING FORWARD: all at once, one side per firm 2:00 · MNQ 20 · one side per firm (6 firms) · stop ride to the floor	30.3%	30.2% / 30.4%	10 (0–20)	85%	15%	2.0	$396
Own random side per account (watch the hedging rules) 2:00 · MNQ 20 · own random side per account · stop ride to the floor	30.4%	30.1% / 30.8%	8 (5–15)	92%	0%	2.1	$395
⚠ One side for all 30 2:00 · MNQ 20 · one side for all · stop ride to the floor	31.7%	31.5% / 31.9%	0 (0–30)	32%	68%	1.6	$379
Same as ⚡ but at 9:30 9:30 · MNQ 20 · one side per firm (6 firms) · stop ride to the floor	28.7%	29.3% / 28.1%	10 (0–15)	84%	16%	2.1	$418
★ Rotation one after another, always BUY (earlier report) MNQ 20 · all day · ride to the floor	31.1%	30.9% / 31.2%	9 (6–13)	97%	0%	4.7	$386

1 · Risk the full $2,000 or 1:1?

MNQ 20, own random side, target +$1,500 after costs. **Riding the full room passes the most.** A smaller stop leaves room for a second day, but each trade then reaches +$1,500 less often: about

57% riding $2,000 vs about 50% at 1:1.

START	STOP	PASSED	2020–23 / 2024–26	PER BATCH (10TH–90TH)	DAYS PER BATCH
2:00	ride the full room (–$2,000)	30.4%	30.1% / 30.8%	8 (5–15)	2.1
2:00	–$1,500 (1:1)	27.1%	27.1% / 27.1%	8 (5–12)	5.3
2:00	–$1,000	26.6%	27.4% / 25.6%	8 (0–15)	6.8
2:00	–$500	21.6%	23.0% / 20.0%	6 (0–15)	11.3
9:30	ride the full room (–$2,000)	28.5%	29.3% / 27.6%	8 (4–14)	2.2
9:30	–$1,500 (1:1)	25.8%	26.0% / 25.6%	8 (4–11)	5.1
9:30	–$1,000	25.2%	24.8% / 25.7%	8 (0–13)	6.6
9:30	–$500	21.6%	20.8% / 22.5%	6 (0–14)	10.0

2 · Same-day recovery after a –$1,500 loss

With a 1:1 stop (–$1,500), the losing accounts trade again **the same day**, risking the $500 left. Recovery adds about 0.5–1 point at most, and it never reaches the plain "ride the full $2,000".

START	AFTER A −$1,500 LOSS	PASSED	DAYS PER BATCH
2:00	no recovery (the loser waits for tomorrow with $500)	27.1%	5.3
2:00	same side, risk the last $500 for +$500 (1:1)	27.6%	3.7
2:00	same side, risk the last $500 for +$1,000	27.5%	3.3
2:00	same side, risk the last $500 for +$1,500 (back to even)	27.3%	3.0
2:00	same side, risk the last $500 for +$3,000 (even + $1,500)	27.6%	2.3
2:00	flipped side, risk the last $500 for +$500 (1:1)	27.0%	3.5
2:00	flipped side, risk the last $500 for +$1,000	27.3%	3.1
2:00	flipped side, risk the last $500 for +$1,500 (back to even)	26.8%	2.9
2:00	flipped side, risk the last $500 for +$3,000 (even + $1,500)	27.5%	2.2
2:00	**for comparison: ride the full $2,000, no recovery**	30.4%	2.1
9:30	no recovery (the loser waits for tomorrow with $500)	25.8%	5.1
9:30	same side, risk the last $500 for +$500 (1:1)	26.3%	3.4
9:30	same side, risk the last $500 for +$1,000	25.8%	3.1
9:30	same side, risk the last $500 for +$1,500 (back to even)	25.7%	3.0
9:30	same side, risk the last $500 for +$3,000 (even + $1,500)	26.4%	2.4
9:30	flipped side, risk the last $500 for +$500 (1:1)	25.9%	3.4
9:30	flipped side, risk the last $500 for +$1,000	25.7%	3.1
9:30	flipped side, risk the last $500 for +$1,500 (back to even)	25.7%	3.0
9:30	flipped side, risk the last $500 for +$3,000 (even + $1,500)	26.8%	2.4
9:30	**for comparison: ride the full $2,000, no recovery**	28.5%	2.2

3 · Does the start weekday matter?

A new batch each Monday, Tuesday, Wednesday, Thursday and Friday (a Friday batch is known the next Monday). The weekdays stay within a couple of points and swap places from year to year, so start any day. The last weeks are low partly because those batches were **still open** when the data ends (2 October 2026).

⚡ Plan: 2:00 · MNQ 20 · one side per firm · ride to the floor

BATCHES STARTED ON	ALL WEEKDAYS	MONDAY	TUESDAY	WEDNESDAY	THURSDAY	FRIDAY	STILL OPEN AT DATA END

How it was measured

Exits are checked on 1-minute closes. A trade still open at the session end closes at the market. TPT's extra day is not added. Per-firm daily loss limits are not modelled; check each firm's rules page. A recovery trade starts the minute after the loss and risks exactly the room left. Past results don't promise future ones. The full data and the program are in the KeyStone repo (docs/reports).
