SpasiX MT5 — Setup

SpasiX MT5 • BUILD 2026-10-24b • MetaTrader 5 (IC Markets) on Windows

What this version does

Opens full screen with the SpasiX look: the 📈 **CHART** (candles from MT5, M1–W1, zoom / scroll, your tickets with their average, lots and P/L, S/L, T/P, pending orders, bid / ask, crosshair), 💼 **POSITIONS**, 👁 **MARKET** (click a symbol = its chart) and the account cards. It still **only reads** — there is no trading code yet (that is the next step).

Already set up the first version? Do only this

- In MT5 remove the old bridge: right-click the chart ▸ **Expert list** ▸ select KeystoneBridge ▸ **Remove**.
- Close the old app. Use `SpasiXMT5.exe` from now on (you can delete KeystoneMT5.exe).
- Do steps 2 and 5–7 below with `SpasiXBridge.mq5` . The 127.0.0.1 setting (step 4) is already done.

1 The files

- `SpasiXBridge.mq5` — the bridge for MetaTrader 5
- `SpasiXMT5.exe` — the SpasiX MT5 app (put it in its own folder, e.g. `C:\SpasiX`, not inside MT5)

2 Put the bridge into MT5

- MT5 → **File** → **Open Data Folder** → `MQL5` → `Experts` → paste `SpasiXBridge.mq5` there, next to the folders.
- **Restart MT5** — it compiles the file and **SpasiXBridge** appears under Expert Advisors in the Navigator.

3 (only if it does not appear) Compile it

- MT5 → press **F4** (MetaEditor) → MQL5 ▸ Experts ▸ double-click SpasiXBridge.mq5 → **F7**. It must say **0 errors** (send a screenshot if not).

4 Allow the local link (once)

- MT5 → **Tools** → **Options** → **Expert Advisors** → tick **Allow WebRequest for listed URL** → click "+ add new URL" → type `http://127.0.0.1` → Enter → OK.
- "Allow algorithmic trading" can stay OFF — the bridge only reads.

5 Start the app

- Double-click `SpasiXMT5.exe`. A SpasiX loading screen appears, then the platform opens full screen.
- First time only: if Windows asks for the **.NET 8 Desktop Runtime**, click Yes, install it, start the app again. "Windows protected your PC" → **More info** → **Run anyway**.

6 Start the bridge

- Drag **SpasiXBridge** onto ONE chart (e.g. XAUUSD) → OK.
- The chart's corner says **SpasiX: connected to the app**; the app turns green and opens the 📈 **CHART**.

7 Using the chart

- Symbols: the buttons at the top (the ones with tickets first). Timeframes: M1 M5 M15 M30 H1 H4 D1 W1.
- **Mouse wheel** = zoom • **drag** = older candles / up-down • **drag the price axis** = stretch • **double-click** or ⟲ **AUTO** = back to now with the automatic scale.
- Your tickets: each side's **average entry** with tickets, lots and P/L (strong line), every ticket faint, S/L red, T/P green, pending orders cyan. Times are MT5 server time.

If something is not right

- Chart corner "add 127.0.0.1 …" → step 4. "waiting for the SpasiX MT5 app (error 5272)" → the app is not open.
- The chart says "the chart needs the new bridge" → the old KeystoneBridge is still running: do the blue box at the top.
- "port 47123 is busy" → the app is already open (close the second one).
