SpasiX — Setup & trading

SpasiX • BUILD 2026-10-24c • MetaTrader 5 (IC Markets) on Windows

Updating from the previous version (2 minutes)

- Close the old app (SpasiXMT5.exe). From now on start `SpasiX.exe` (delete the old exe).
- Copy the new `SpasiXBridge.mq5` into MT5's `MQL5\Experts` folder (replace the old file) and **restart MT5** — the bridge on your chart updates itself.
- Your link setting (127.0.0.1) stays. Only if you want to TRADE from SpasiX: step 4 below.

1 First time only: the bridge in MT5

- MT5 → **File** → **Open Data Folder** → `MQL5` → `Experts` → paste `SpasiXBridge.mq5` → restart MT5.
- MT5 → **Tools** → **Options** → **Expert Advisors** → tick **Allow WebRequest for listed URL** → add `http://127.0.0.1`.
- Drag **SpasiXBridge** onto ONE chart → OK. Start `SpasiX.exe` (first time: allow the .NET 8 Desktop Runtime; "Windows protected your PC" → More info → Run anyway).

2 The chart

- **Symbols** (cyan) at the top — ● = you have tickets on it • ＋ = add any instrument of your broker. **Timeframes** (gold) M1 … W1.
- ▣ **1** / ◫ **2** / ⊞ **4** = split screen (click a chart to select it — the toolbar works on the selected one). 🕘 time zone (New York, London, Central Europe, … or MT5's server). 🎨 8 chart themes.
- Indicators (each its colour): EMA 9 / 21 / 50 / 200, VWAP, FVG zones, NY opening range, yesterday's high / low.
- Mouse: **wheel** = zoom • **drag the chart** = move • **drag the time axis** = stretch / squeeze the candles • **drag the price axis** = stretch the price • **double-click** or ⟲ **NOW** = back to now • **right-click** = the menu (timeframe, draw, indicators, theme, time zone, split, limit / stop orders at that price) • ⛶ **FULL** or **F11** = the chart over the whole screen (Esc to leave).
- Drawings: right-click ▸ Draw (horizontal / vertical line, trend line, rectangle) — click to select, drag to move, **Del** to delete. They are saved per symbol.
- ⏱ next to the price = the time left in the candle. 📰 a banner warns before high-impact news of the chart's currencies (flashing 15 min before).

3 Before trading: please test on a DEMO first

Trading from SpasiX sends REAL orders on a real account. Open a free IC Markets demo, log into it in MT5, attach the bridge there and try every button first. Nothing is sent unless BOTH switches below are on.

4 Allow trading (only when you want it)

- On the bridge's chart: right-click → **Expert list** → SpasiXBridge → **Properties**: **Common** → tick **Allow Algo Trading** • **Inputs** → **AllowTrading = true** (and **MaxLotsPerOrder** = your largest order) → OK.
- Turn ON **Algo Trading** in the MT5 toolbar.
- In SpasiX, the trade panel (right of the chart): 🔓 **ARM TRADING** → Yes. It stays armed until you DISARM or close SpasiX.

5 Trading from SpasiX

- **LOTS** (−/+ or 0.01 … 1.00), optional **STOP / TARGET distance** (gold: 5 = a $5 move) → **SELL** / **BUY**. It asks first unless you tick "one-click" (above 2 lots it always asks).
- **Limit / stop**: pick the type, type the price or 🎯 **PICK** and click the chart → **PLACE ORDER**. Or right-click the chart at a price.
- On the chart every ticket has its line and a label with ✕ (close it). **Drag a ticket line** up / down = sets its target / stop. **Drag a S/L or T/P line** = moves it, its ✕ removes it. **Drag a pending order** = new price, ✕ = cancel.
- **MANAGE**: close all / buys / sells / in profit / in loss on this symbol • ⚖ **BREAKEVEN** (+ points) • cancel orders • ⛔ **CLOSE EVERYTHING** (all symbols). Each asks first.
- 💼 **POSITIONS**: every ticket with ✕, ½ (close half), its own S/L / T/P boxes + SET, ⚖ breakeven, and the same bulk buttons.
- MT5's answer to every order appears at the bottom of the chart and in 🗒 **MT5 ANSWERS**.

6 Other tabs

- 👁 **MARKET**: each symbol's price, today's change and range, spread, your exposure, its next high-impact news — click = its chart.
- 📰 **NEWS**: the ForexFactory calendar of the week in your time zone (high / medium / all, your currencies highlighted).
- 👁 **STREAM MODE** (or click your name): the account name and number are blurred.
- Closing SpasiX asks first — your positions stay open in MT5.

If something is not right

- Trade panel says "update the bridge to v3" → copy the new SpasiXBridge.mq5 and restart MT5. "AllowTrading is false" / "Algo Trading" → step 4.
- An order answered "✖ …" = MT5's own reason (market closed, invalid stops, not enough margin, …).
- Chart corner "waiting for the SpasiX app (error 5272)" → start SpasiX.exe.
